***Allowable Subject Matter***

1. Claims 1-4 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Regarding claims 1 and 3, Smith et al (US 6,025,805) discloses an inverted-e antenna comprising a signal line or feeding portion connecting to a signal source for feeding a voltage signal; first and second short-circuit ends, respectively connecting to a grounding area for outputting the voltage signal to the grounding area; and a radio-frequency area, being supported over the grounding area by means of the first and second short-circuit ends. Smith, however, fails to specifically teach that the radio-frequency area and the grounding area have a same length so that a signal is corresponded in radio-frequency to the length of the radio-frequency area and an electromagnetic wave of the corresponding frequency is received from the outside, the corresponded signal traveling to the grounding area via the short-circuit ends.

Claim 2 is allowed for depending on claim 1.

Claim 4 is allowed for depending on claim 3.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Patent 6,448,933 B1 discloses an antenna comprising a radio-frequency area being supported over a grounding area by first and second short-circuit elements.

Art Unit: 2821
